

Representação de Imagens

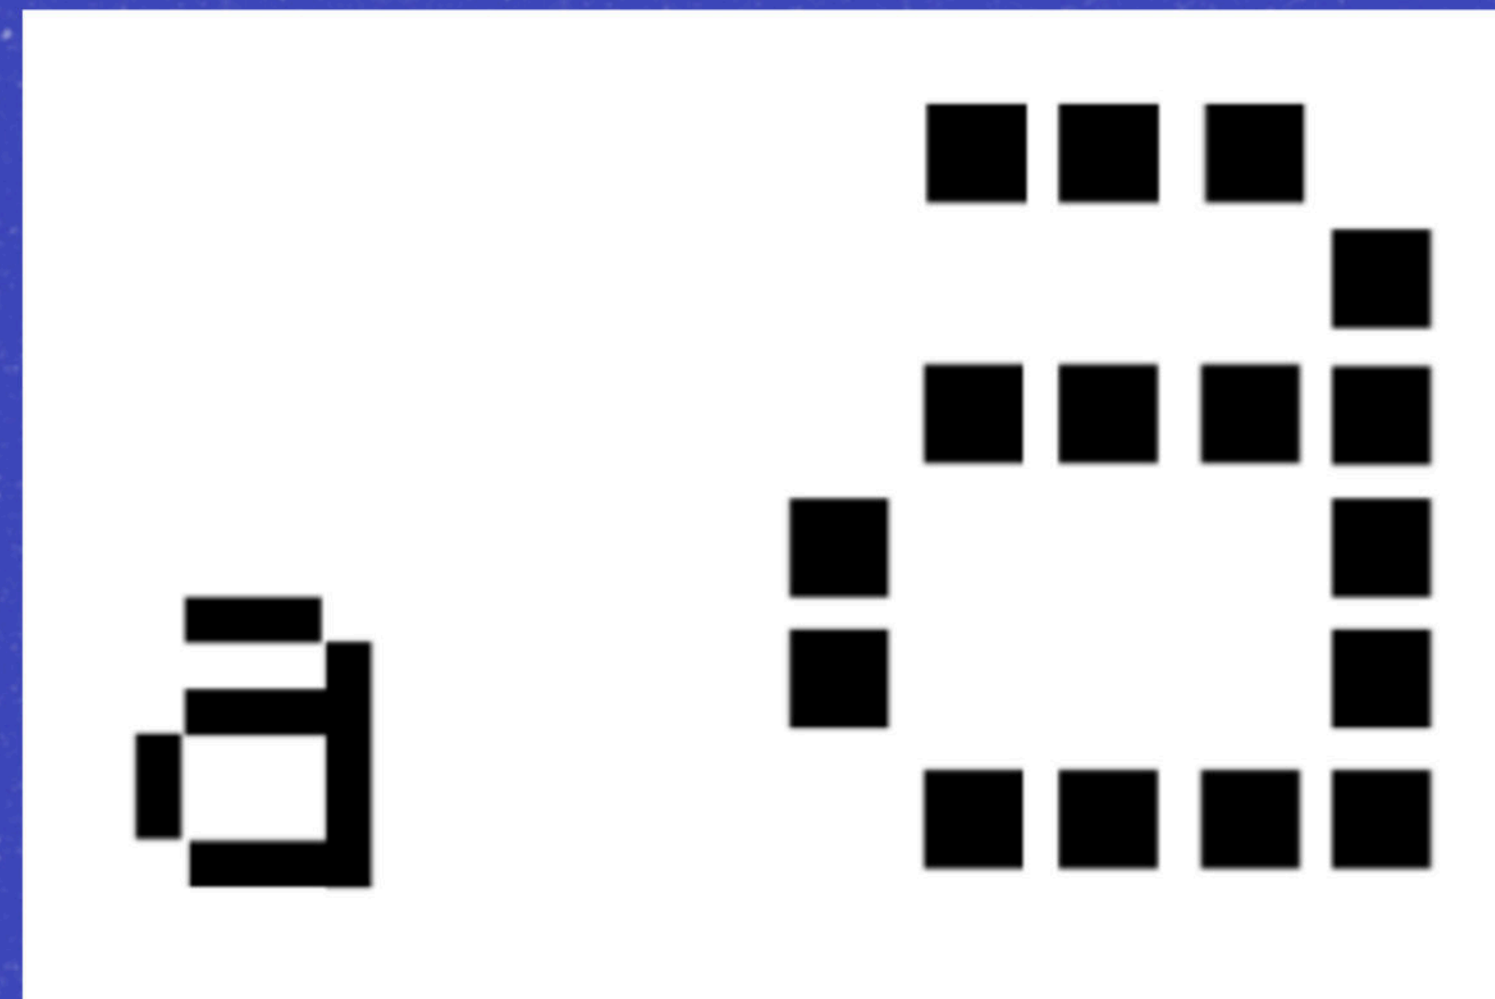

**COMO UMA IMAGEM
APARECE NA TELA DO
CELULAR E COMPUTADOR?**

Na imagem ao abaixo, a letra “a” foi ampliada para mostrar os pixels.

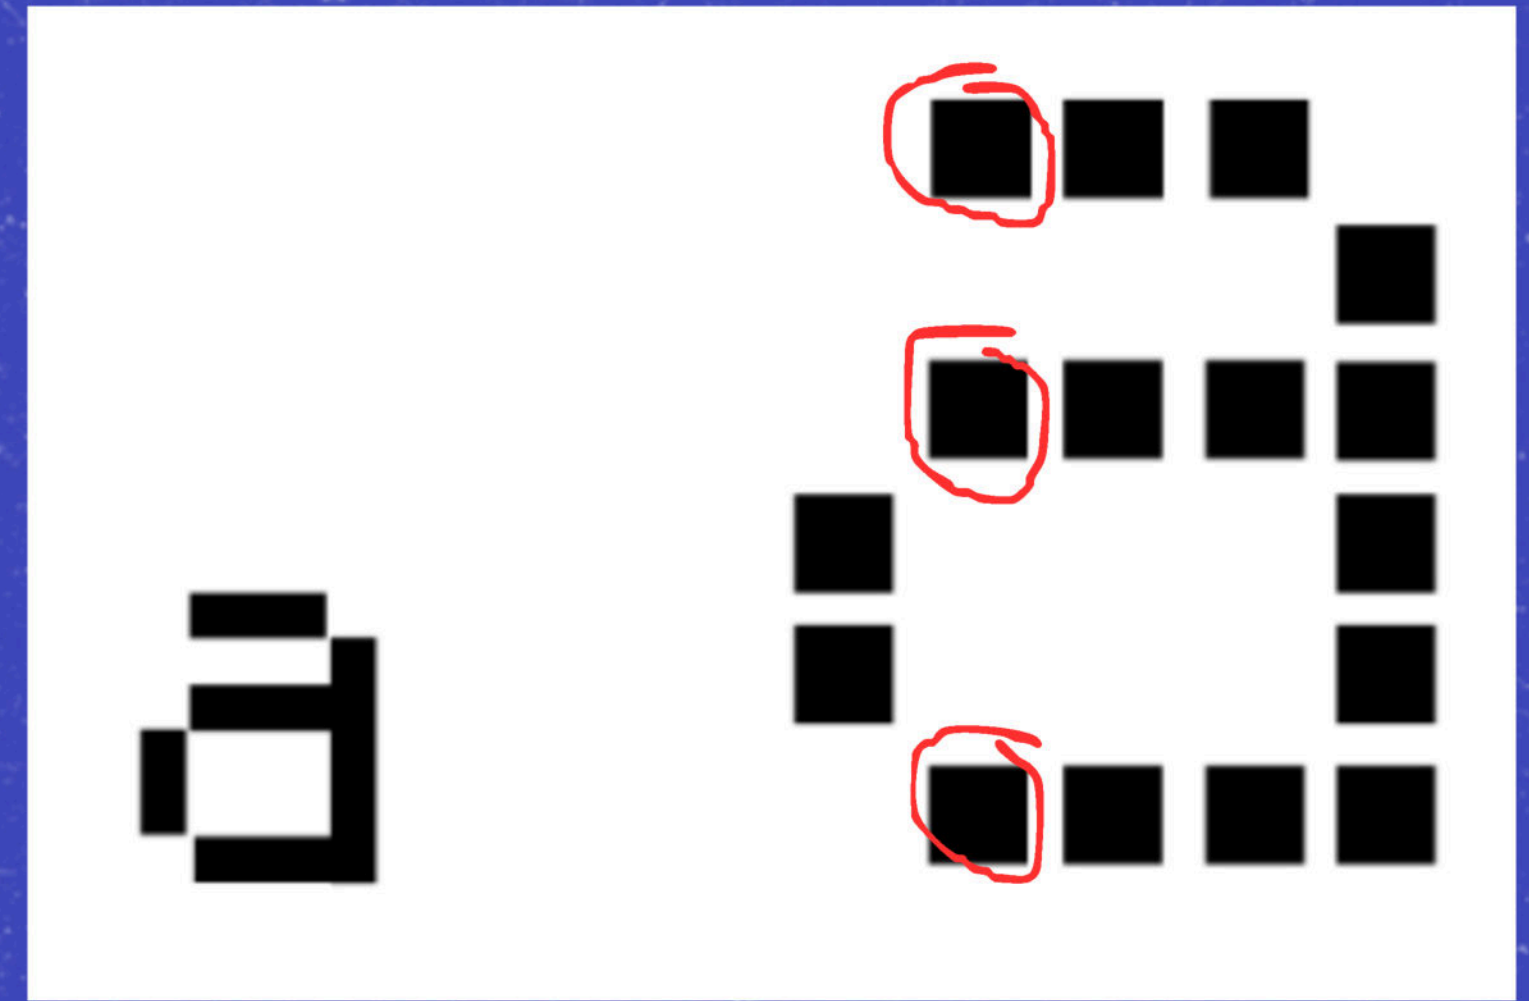

Em uma foto em preto e branco, cada pixel ou é preto ou é branco.

O que é um pixel?

Um pixel, é o menor ponto que forma uma imagem digital, e um conjunto de pixels forma a imagem inteira.

Se você aumentar o zoom em uma imagem em um computador ou celular, verá que, na verdade, ela é composta de muitos blocos como na imagem ao lado.

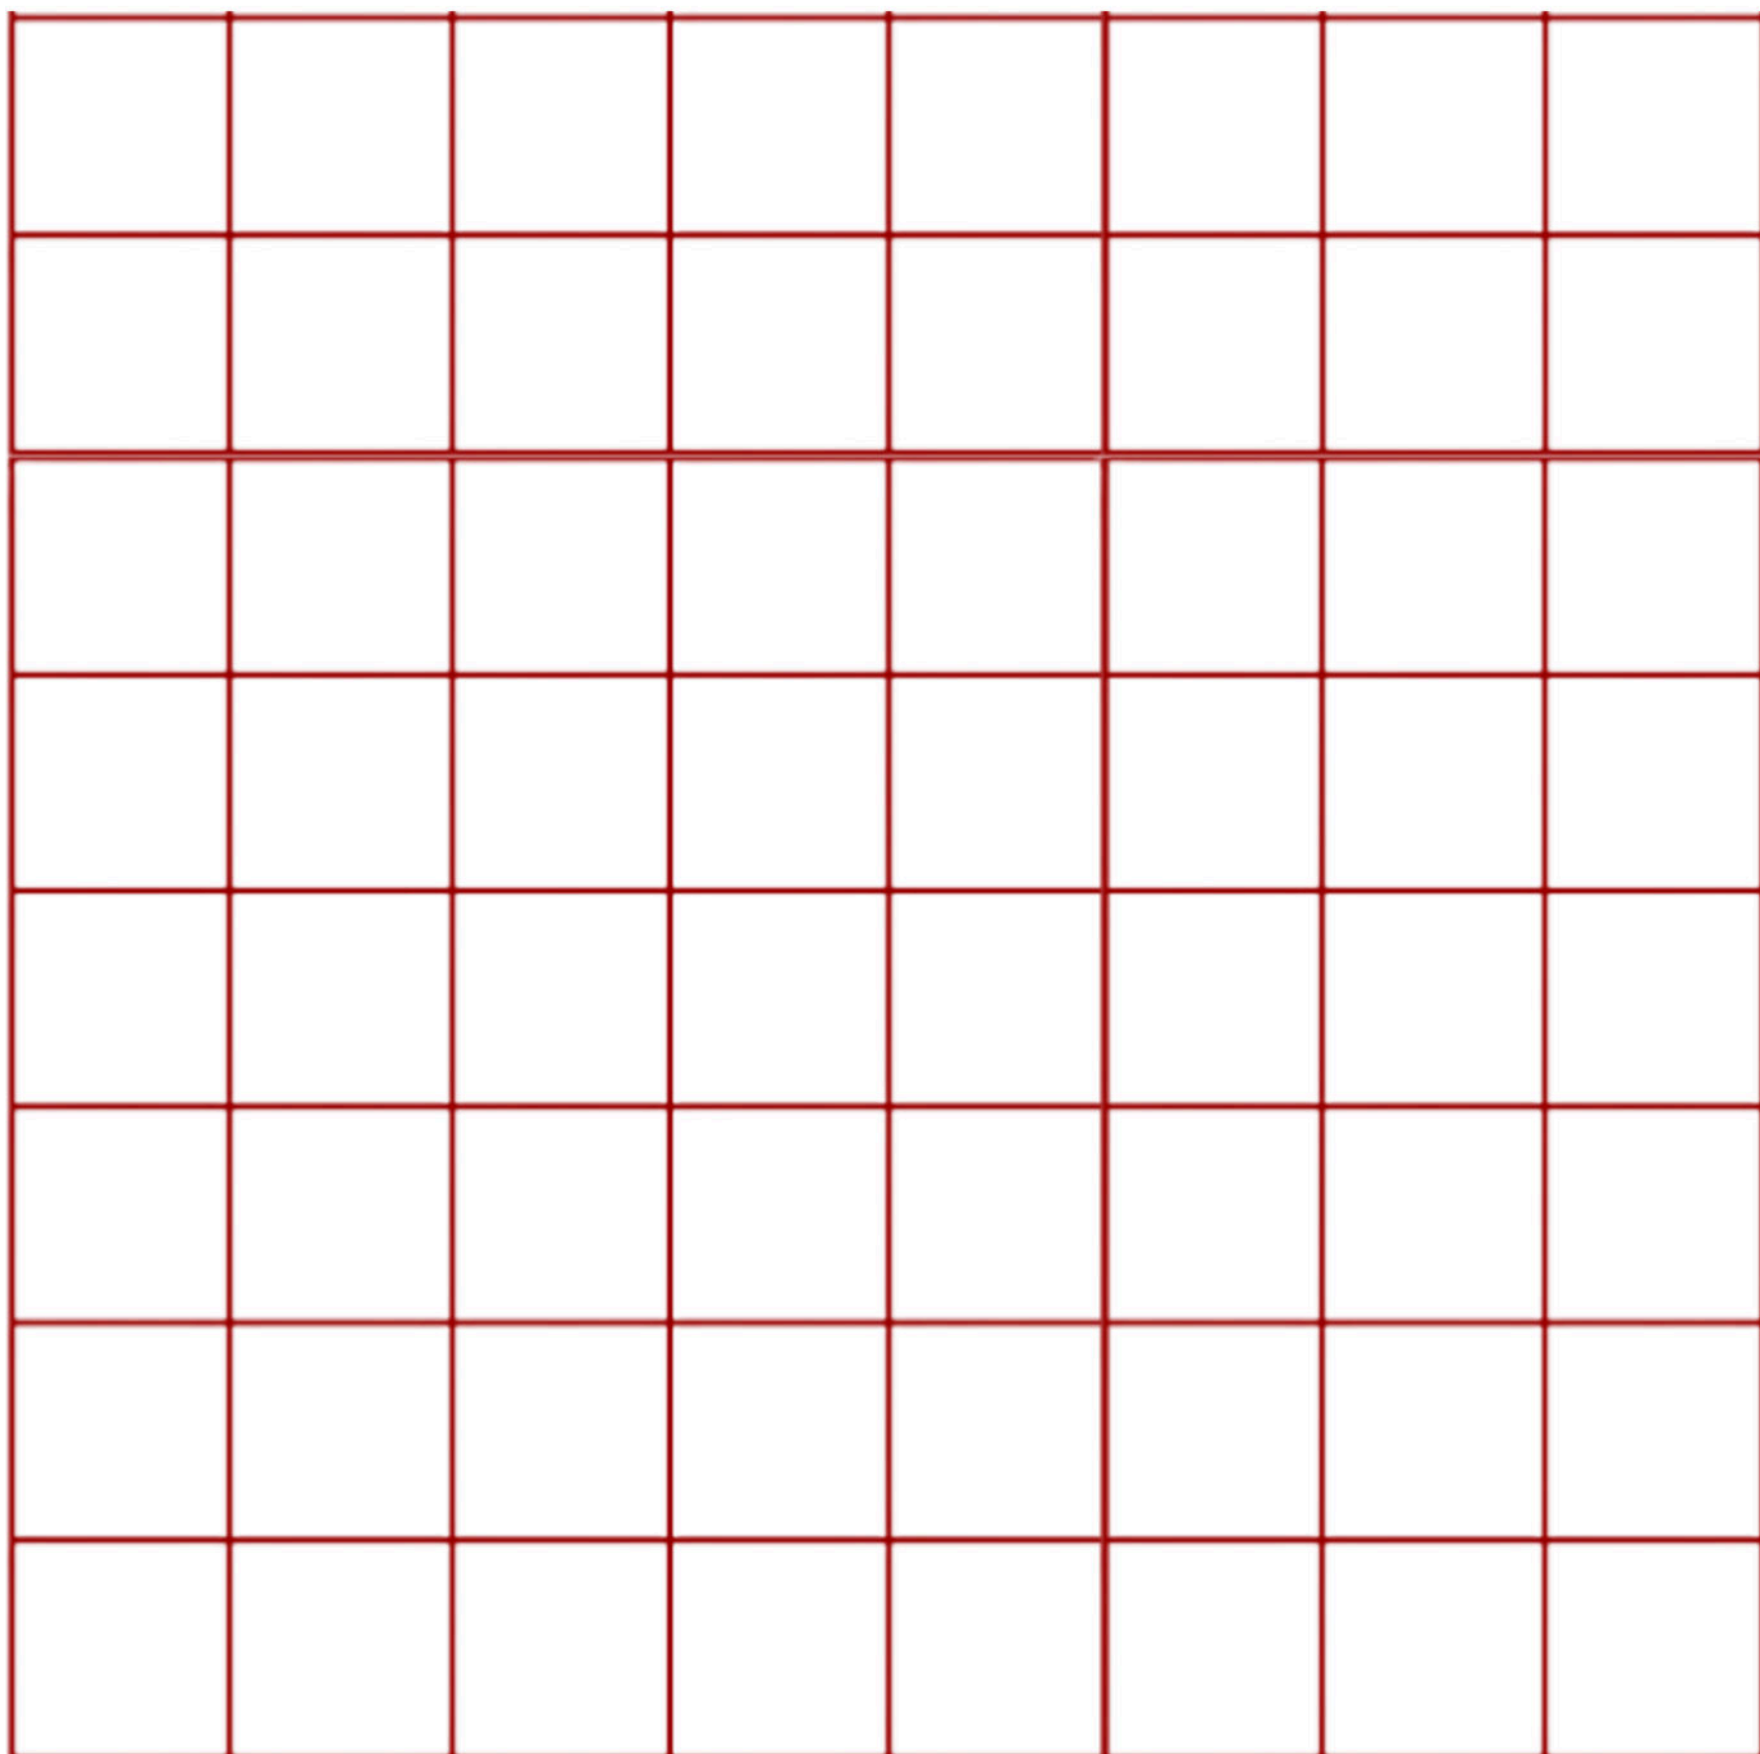

Como funciona essa representação?

O primeiro número sempre se refere ao número de pixels brancos. Se o primeiro pixel for preto, a linha começará com um zero.
